## How to Reach Amawalk

Amawalk is located in Westchester County, thirty miles north of New York City. The entrance to the Nursery is opposite the railroad station at Amawalk, on the Putnam Branch of the New York Central. This railroad connects in New York City with the Hudson River Division of the New York Central Railroad at High Bridge, and with the Sixth and Ninth Avenue elevated roads at Sedgwick Avenue. Amawalk is eight miles east of Peekskill on the Hudson River Division and five miles west of Katonah on the Harlem Division of the New York Central. The Nursery is located on the State Road from Briarcliff to Lake Mahopac. The main roads in every direction are State roads and motorists will find them in excellent condition.

# AMAWALK TREES

Amawalk was established over twenty years ago for the purpose of producing the finest large-sized ornamental trees that can be grown.

The location for the Nursery was most carefully selected with regard to soils, exposures and shipping facilities. **Location**

Amawalk has over 600 acres of the most fertile land in the hills of Westchester County, thirty miles north of New York City. On our hills we have light, dry soils and exposed situations, and in the low lands rich, heavy ground and sheltered locations. Owing to these exposures and soils we are able to grow each kind of tree under the conditions most favorable to its development. **Soils and exposures**

A more severe winter climate prevails at Amawalk than in New York City, due to an altitude of four hundred to one thousand feet, thereby producing a hardier growth in our trees than would otherwise be possible. We grow only those varieties of trees which we have proved to be absolutely hardy. **Climate produces hardy growth**

The most scientific methods are used in the development of Amawalk trees. They are continuously cultivated, top-pruned, root-pruned and transplanted. Every tree listed in our catalogue has been growing at Amawalk for from ten to twenty years, during which time it has been many times transplanted in order to obtain the fibrous root development necessary to withstand its final transplanting with the least possible setback. **Scientific development of Trees**

## AMAWALK TREES

---

### **Only developed Trees offered for Sale**

We do not offer any small-sized, immature trees for sale. Only those trees are catalogued that have received sufficient Amawalk training to enable them to assume the habits of the matured tree. The longer we grow our trees the finer they become; our 20 to 30 foot evergreens are heavier and older, and our 10 to 15 inch deciduous trees are more matured than are trees of similar size elsewhere.

### **Digging Trees**

The greatest care is taken in the digging and handling of our trees, so as not to injure either the root system or the branches. Our most experienced men are in charge of the digging, the balling and the loading of the trees.

### **Loading Trees**

No order is dug until just before the trees are to leave the Nursery. If the trees are to be delivered by truck, they are dug in the morning, loaded on the truck in the afternoon, and delivered as early as possible the next morning. When the order is to be shipped by freight, the trees are not dug until the freight car is on our siding.

### **Railroad shipments**

An advantage of our location on the Putnam Branch of the New York Central Railroad is that our freight shipments to the North, South, East and West do not have to be routed through New York City. Our shipments to the West make Albany the second day after leaving Amawalk.

### **Planting Trees**

We guarantee that every tree leaving Amawalk is in the best condition obtainable with scientific care and handling. To obtain the best results, this tree has to be planted on the purchaser's grounds in the soil and exposure best suited to its variety. It has also to be properly planted and receive adequate attention for the first year after

## AMAWALK TREES

---

transplanting or until its roots become re-established.

Through a method of inspection of all trees planted within calling distance of Amawalk, we are in touch with the condition of each tree we send out and give advice in regard to its care. These inspections are made periodically, and a record is kept in our office. To those customers who live too far from our Nursery to get the benefit of this service we give our best advice by letter, and endeavor to have a representative inspect their trees at least once or twice a year.

### **Advice in regard to care of Trees**

To our customers we are glad to give, without charge, detailed instructions in the planting and care of their trees, as well as advice as to what varieties of trees will do best planted on their estate.

### **Advice in regard to planting**

We will, upon request, be glad to advise them as to how they can best obtain information as to the development of any part of their grounds.

### **Advice in regard to development of property**

A country place properly planted should increase yearly in value and beauty, and it is to this end that we are anxious to cooperate with our customers to obtain for them at an early date the full beauty and development of their trees.

# Measurements, Prices, Delivery and Guarantee

**Measuring Trees**      Deciduous trees are measured by their caliper, diameter of the trunk 9 to 12 inches from the ground. As no two trees will make the same growth, the height of the deciduous trees is approximated in this catalogue as closely as possible. Evergreens are measured by their height only.

**Specimen Tree standard**      All trees listed in this catalogue measure up to the highest requirements of specimen trees. No inferior trees are grown at Amawalk. The yearly output of Amawalk trees is about 20,000 specimens, to produce which number we have growing over 1,000,000 trees of all sizes.

**Selecting Trees**      We are always pleased to have customers visit Amawalk and choose by tagging their own trees. As none but specimens are grown, customers are allowed to select any tree at the catalogue price for its variety and size. The price per tree is the same regardless of the quantity ordered.

**Prices**      The catalogue price of our trees includes their proper digging, balling when necessary, and loading on trucks or in freight cars. All evergreens and certain deciduous trees (such as Beech, Dogwoods, and Hawthorns) are dug with a ball of earth around the roots. The balls of smaller sizes are secured with burlap, and the larger with a canvas bag and wooden platform. This insures the least possible disturbance of the roots.

## AMAWALK TREES

---

The prices in this catalogue are f.o.b. Amawalk. **Deliveries**  
Deliveries can be made by freight, express or motor truck. For freight shipment the cars are packed on our own siding. For less than carload shipment, packing is charged for at cost. For delivery by motor truck, cost price only is charged, this charge being based upon the size of the load and the distance it has to go.

We guarantee that every tree leaving Amawalk **Guarantee**  
is in the best condition obtainable by scientific care and handling. If correctly planted in suitable location, and given adequate attention thereafter, they will live. As we have obviously no control over the treatment our trees receive after leaving our hands, we do not guarantee that they will live. To do so would mean increased prices and would place an unnecessary burden on those customers whose trees are properly cared for. However, to accommodate those purchasers who prefer their trees insured, we will for a pre-arranged premium agree to re-supply f.o.b. Amawalk any tree which fails to live one year after transplanting.

We are anxious to cooperate with our customers in making their planting a permanent success and will advise them about the care of their trees, either by letter or personal call, without cost for a period of one year.

## Beech—Fagus

Amawalk Beech are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

### EUROPEAN. *Fagus Sylvatica*

The time is coming when the value of the European Beech will be as greatly appreciated in this country as it now is in England, where it is one of the favorite trees for lawn and hedge planting. As a specimen it forms a large and majestic tree, with branches growing to the ground, in contrast to the maples, oaks and other high branched trees. For hedge planting it has no equal, making a beautiful, permanent and impenetrable barrier. The old leaves remain until they are forced off by the new ones in the spring, and it is therefore as useful as the ever-greens for a screen during the winter.

### NORWAY. *Acer Platanoides*

The Norway Maple is one of the most satisfactory trees for either street or lawn planting. It grows rapidly in even the poorest soil and most exposed situations, and suffers practically no setback after transplanting. It forms a large tree with a spreading head and deep green leaves which remain on the tree until November. The only condition in which the Norway Maple will not thrive is in wet ground. There it is safer to plant the Sugar or Silver Maple.

*Block of sheared Retinospora 15 to 20 feet high, ready for formal planting.*

*At Amawalk no tree is offered for sale until it has attained the characteristics of the mature tree.*

*Austrian Pine 25 to 30 feet high. They thrive best in exposed situations.*

*American Pin Oak 10 inch caliper, 32 feet high, the most rapid growing of the Oaks.*

*Amazwalk Norway Maple 10 inch caliper, 32 feet high, the most satisfactory deciduous tree for general planting.*

*European Beech hedge at Amawalk 12 feet high. A beautiful and impenetrable hedge which will stand great exposure.*

*A block of sheared Norway Spruce 20 to 30 feet high.*

*Amawalk European Beech 8 inch caliper, 22 feet high,  
a valuable lawn tree.*

*Aerial view of about 100 acres of our 650 acres at Amawalk.*

*Amawalk is located in the hills of Westchester County, thirty miles north of New York City, in the midst of the estate country between Long Island Sound and the Hudson River. Bordering Amawalk on the east is the Putnam Division of the New York Central Railroad, while Peckskill, on the Hudson River Division, and Katonah, on the Harlem Division, lie eight and six miles to the west and east. Situated on one of the principal State Roads of the county, Amawalk is easily accessible from all points.*

*Amawalk was established over twenty years ago for the development of specimen ornamental trees; nineteen years ago the first tree was offered for sale.*

*A more severe winter climate prevails at Amawalk than in New York City, due to an altitude of four hundred to one thousand feet, thereby producing a hardier growth in our trees than would otherwise be possible. Thus the successful transplanting of our trees is assured even to the severe winter conditions prevailing from Boston to Wisconsin.*

*European Elm 8 inch caliper, 28 feet high.*

*American Linden 8 inch caliper, 26 feet high. A symmetrical tree with fragrant blossoms in June.*

*Amawalk Norway Spruce 25 feet high, extensively used for Living Christmas Trees when planted in sheltered locations.*

*Colorado Blue Spruce 20 feet high, hardiest of the Spruces.  
Valuable for its form and color.*

*Block of Douglas Spruce 10 to 12 feet high.*

*Block of Hemlocks 8 to 10 feet high.*

*Evergreens are being extensively planted for their valuable place in the winter landscape.*

*American Arborvitae 8 feet high, valuable for formal planting.*

## AMAWALK TREES

---

### Japanese Maple—*Acer Palmatum*

The Japanese Maple forms a small low-branched tree, growing not more than twenty feet high. It is extensively used for its brilliant coloring and is most effective when several specimens are massed together.

Amawalk Japanese Maples are dug with a ball of earth around the roots, secured with a canvas bag and wooden platform.

#### OSAKAZUKI. *Acer Palmatum Osakazuki*

## Oak—Quercus

It is generally considered that the Oaks are of very slow growth, and for that reason they are not planted as extensively as their beauty and vigor merit. This is a mistaken idea. The Oaks here catalogued make nearly as rapid growth as, for example, the Sugar Maple.

### AMERICAN PIN. *Quercus Palustris*

The most rapid growing of the Oaks. It is a very beautiful variety, distinguished by its long, somewhat drooping branches. The foliage is deeply cut and turns orange and scarlet in the fall.
